- Solve a reconnecting bug in a VPN app (iOS & macOS) for a Dutch educational non-profit organisation.
- Web development for several clients based on TailwindCSS, Javascript, NodeJS and PHP.

Founder & owner

Full Time

WifiMask VPN Utrecht area January 2015 - Present

WifiMask VPN is a fast VPN and ad/malware blocker.

Creating WifiMask VPN involved building the Linux server based infrastructure, iOS & macOS app development, front-end & back-end web development. Through building WifiMask VPN I obtained in-depth knowledge of many different technologies including cryptography, app development, security, fire-walling, load-balancing/failover, automation, monitoring, alerting, logging, web servers, databases, networking and frontend & backend web development.

Full Time

 Joostwebhost

 Utrecht area

 May 2009 – Present

Joostwebhost sells webhosting, email hosting & domainnames.

Over the years I've implemented many different technologies to keep the customers websites secure, online and fast at all times. I have gained experience with webservers, databases, caching, automation, migrations, monitoring, alerting, logging, web development, cryptography, networking, fire-walling, security and load-balancing/failover.

Systems Engineer

Full Time

 CloudVPS

 Rotterdam

 December 2011 – September 2015

CloudVPS is a leading cloud provider in the Netherlands with a focus on Linux & Windows VPS servers.

At CloudVPS I have built, maintained and supported Linux and Windows server & network configurations and got familiar with many different technologies including virtualization, load-balancing/failover, monitoring, alerting, logging, firewalling, security, webservers, databases, networking, hardware & datacenter infrastructure.

Support / System Engineer

Full Time

 Sogeti

 Different locations

 February 2007 – November 2011

Through Sogeti I was subcontracted to several clients from a wide range of industries. I got to experience many different technologies within many different environments & teams and took on helpdesk support, test engineering and system administrator roles.
